Internship: Nasscom SmartBridge - Salesforce Administrator with AI Agentforce

Ganpat University

Team Lead : Itisha Desai Er. No. : 22162171006

Team Member : Nitish Marker Er. No. : 23162582009

Project Name: AI-Powered Customer Support & Service Automation

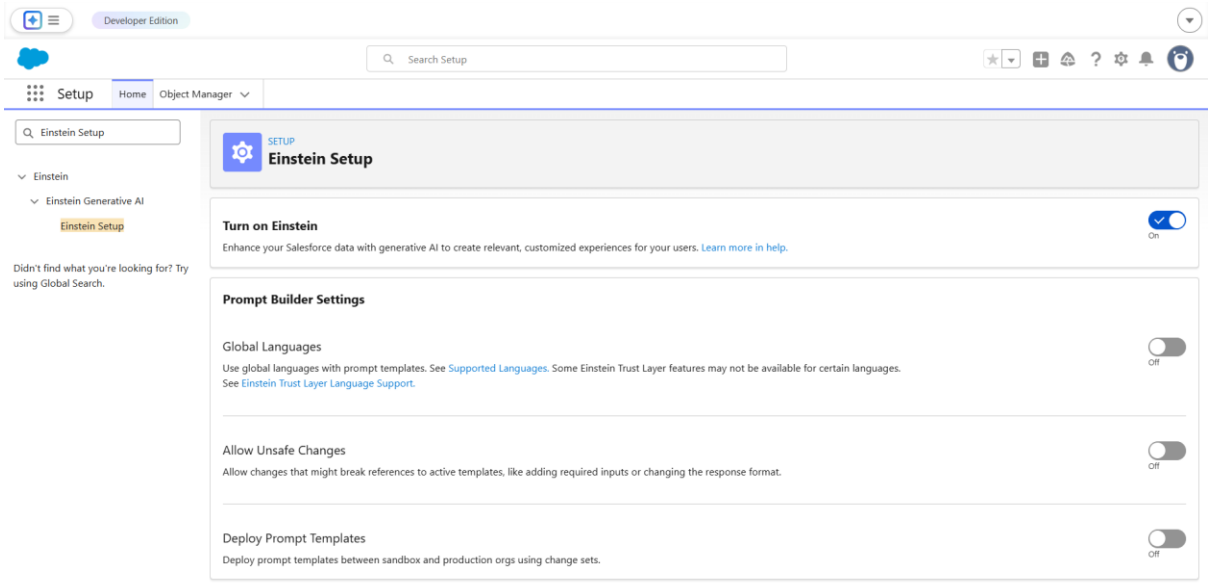
Platform: Salesforce & Skillwallet

Phase 4 : Agentforce, Reporting & Deployment

1: Einstein Generative AI Activation

Einstein Setup and Configuration :

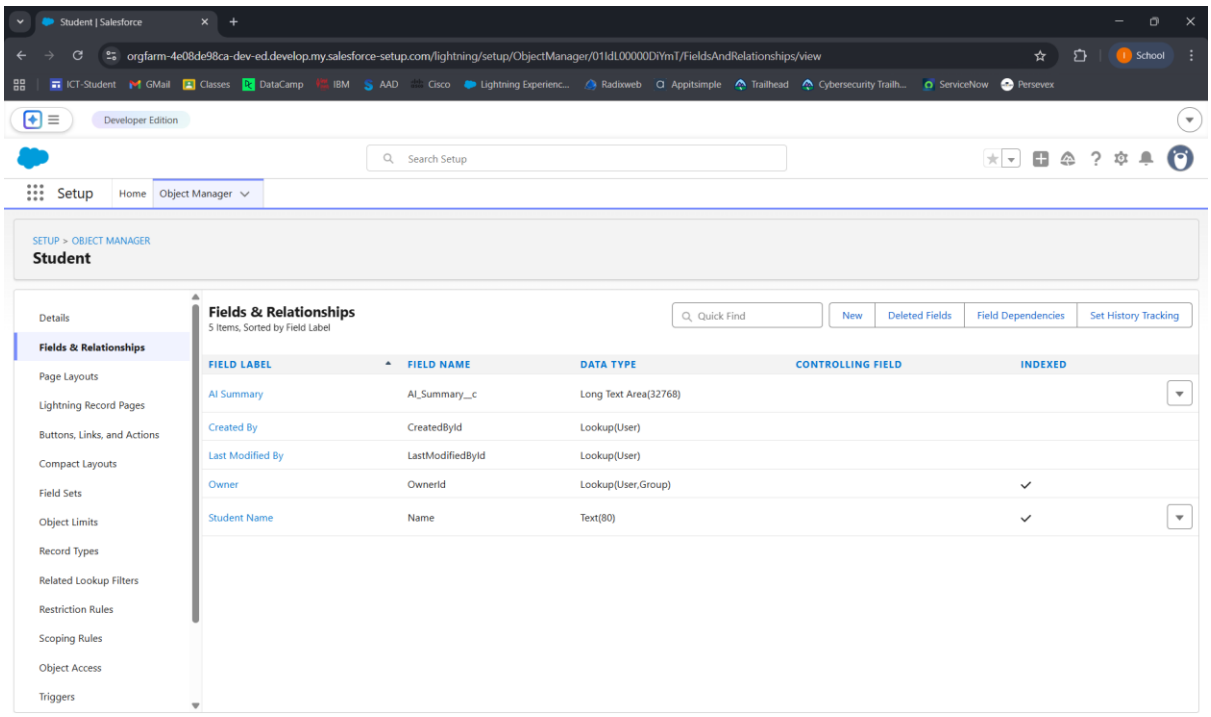
This image shows the initial activation of Einstein Generative AI within the Salesforce Setup menu. By toggling "Turn on Einstein" to the 'On' position, the platform's ability to create relevant, customized experiences through large language models was enabled. This step is a prerequisite for using Prompt Builder and other Agentforce features.



2: AI Data Grounding

Student Object Fields & Relationships :

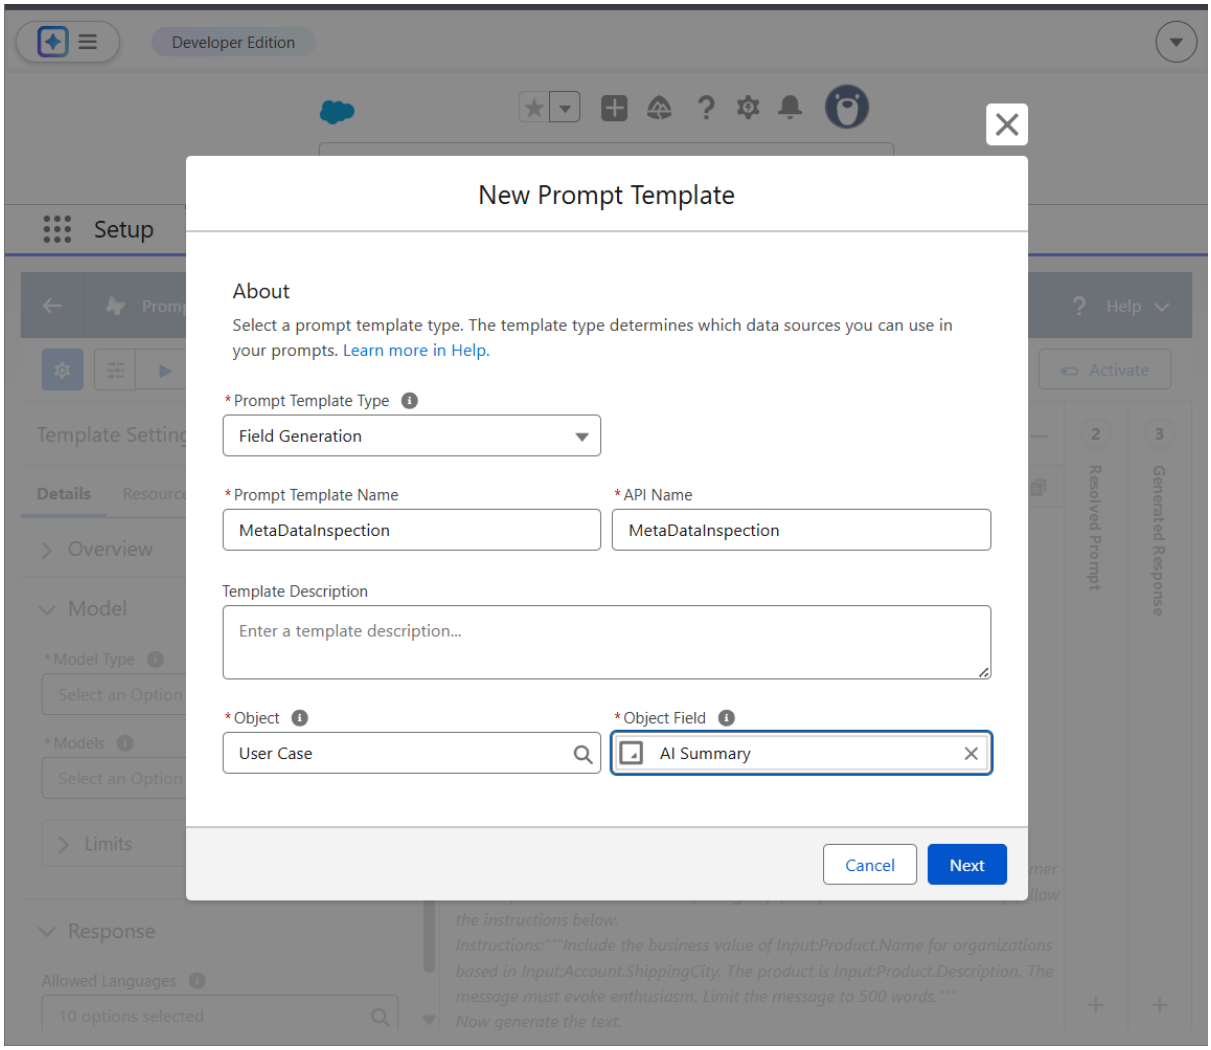
This view from the Object Manager highlights the AI_Summary__c field created on the Student object. This "Long Text Area" field serves as the specific destination where generative AI content is written back to the database, ensuring that AI-generated insights are stored alongside standard record data for user review.



3: Prompt Engineering with Prompt Builder

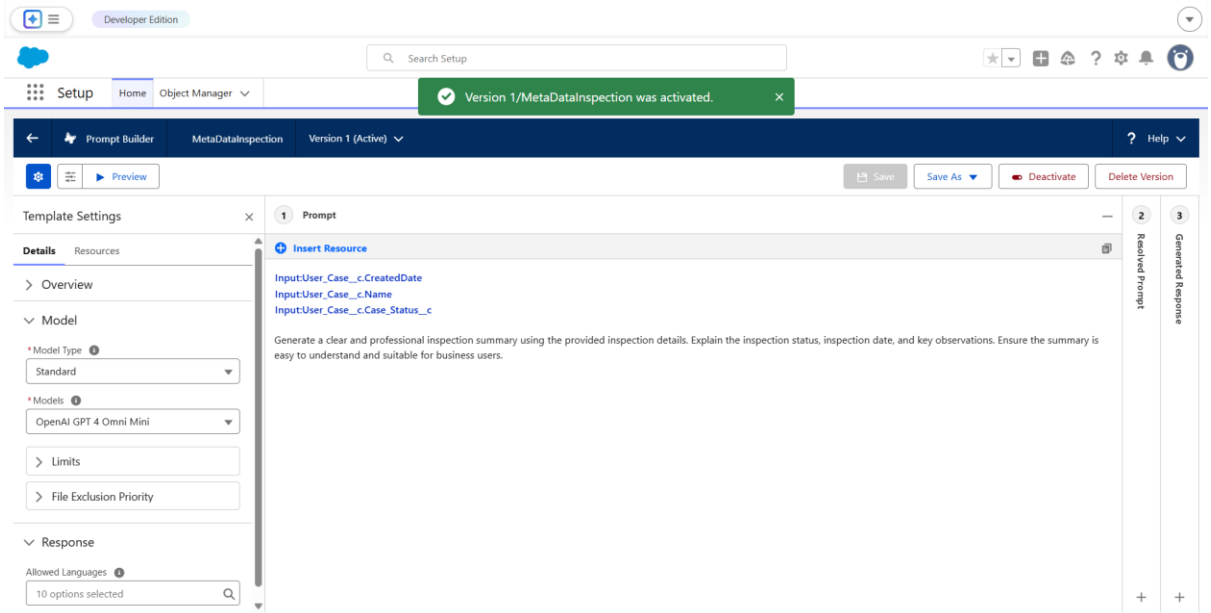
New Prompt Template Setup :

This screenshot documents the configuration of a new Field Generation prompt template named "MetaDataInspection". The template is specifically mapped to the User Case object and targetted at the AI Summary field. This defines the specific business context where the AI will operate.

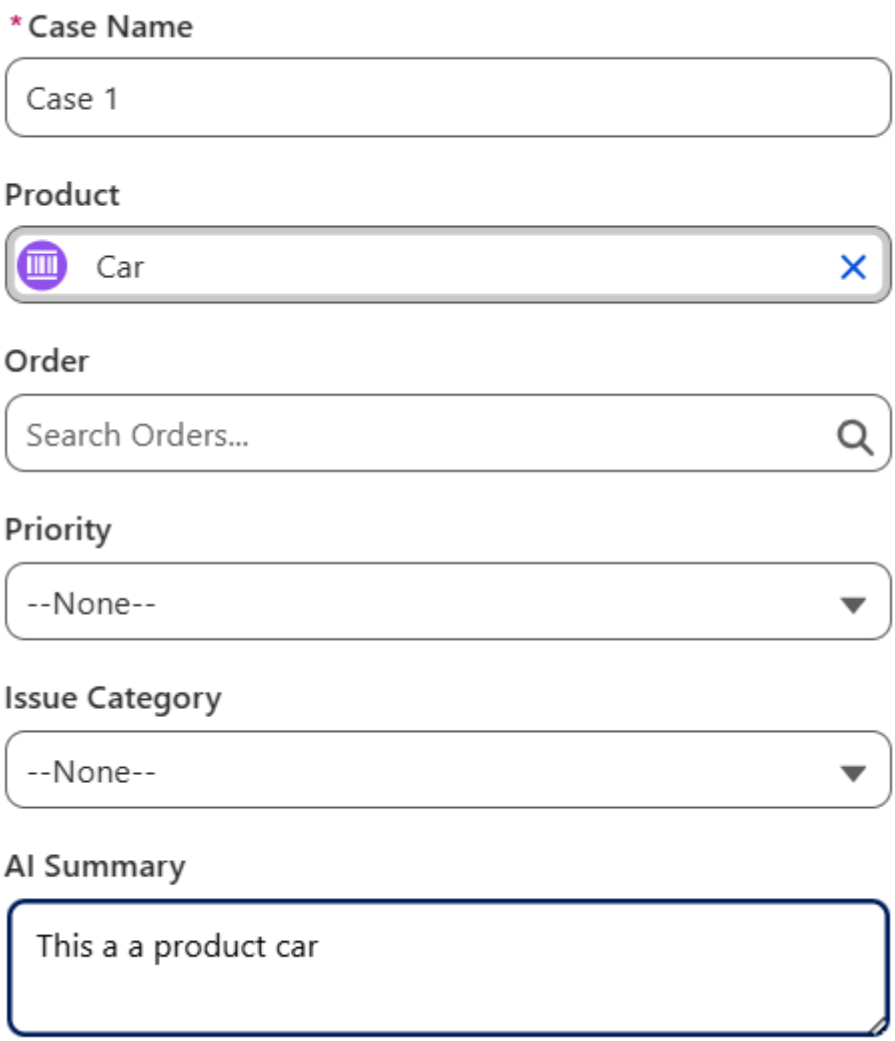


Prompt Template Customization & Activation :

This image shows the finalized prompt logic within the Prompt Builder workspace. I inserted dynamic resources, including CreatedDate, Name, and Case_Status__c, to ground the AI's response in real-time record data. The prompt instructs the model to generate a professional inspection summary suitable for business users using the OpenAI GPT 4 Omni Mini model. The green confirmation bar confirms the template was successfully activated.



4: Front-End AI Interaction

User Case Record Interface :


This final screenshot displays the user-facing record page for a "User Case". It shows the fields for Case Name, Product, and AI Summary. The "AI Summary" field contains the output: *"This is a product car"*, demonstrating that the generative AI successfully populated the field based on the input data provided in the record.
