Internship: Nasscom SmartBridge - Salesforce Administrator with AI Agentforce

Ganpat University

Team Lead : Itisha Desai Er. No. : 22162171006

Team Member : Nitish Marker Er. No. : 23162582009

Project Name: AI-Powered Customer Support & Service Automation

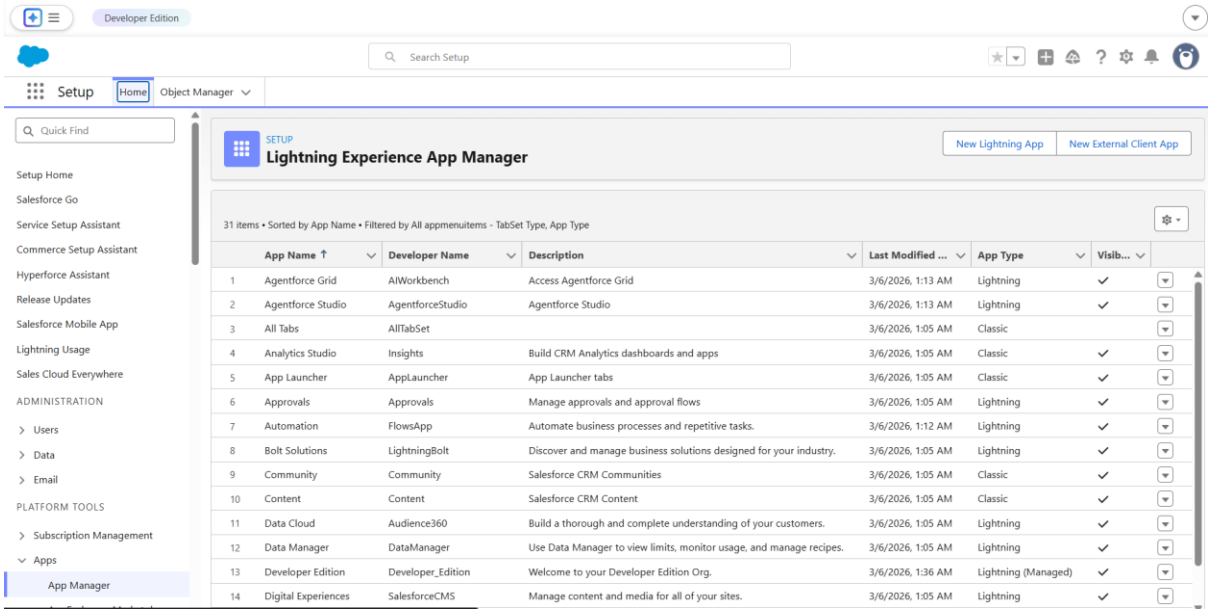
Platform: Salesforce & Skillwallet

Phase 3 : UI/UX Development & Customization

1: Application Architecture & Branding

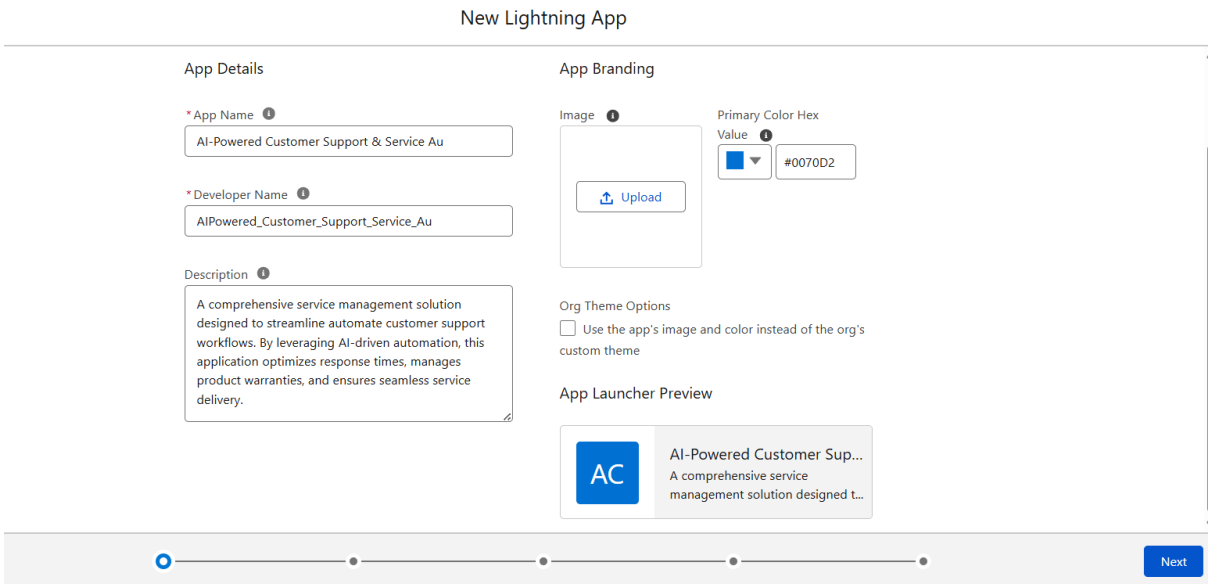
Lightning Experience App Manager :

This image shows the App Manager in Salesforce Setup. I accessed this interface to initiate the creation of a custom Lightning App, which acts as the primary container for the project's custom objects and AI features.



App Details and Branding :

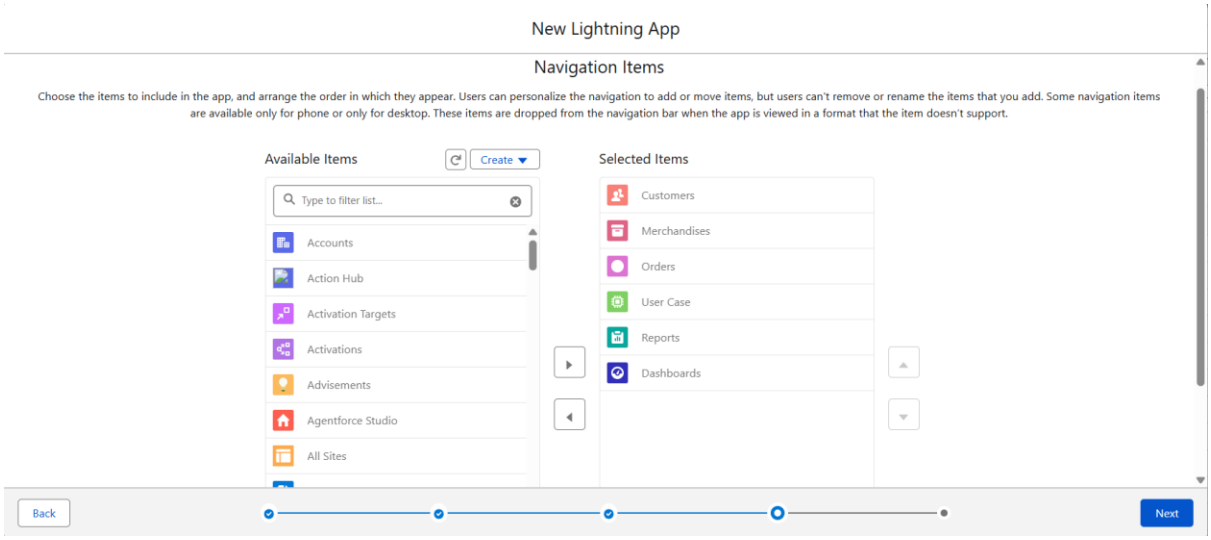
In this step, I defined the application's identity. I named it "AI-Powered Customer Support & Service Automation" and provided a comprehensive description detailing its role in streamlining customer support workflows and managing product warranties through AI-driven automation. I also configured the App Branding by setting a primary hex color code to ensure a professional and consistent look.



2: Navigation & User Accessibility

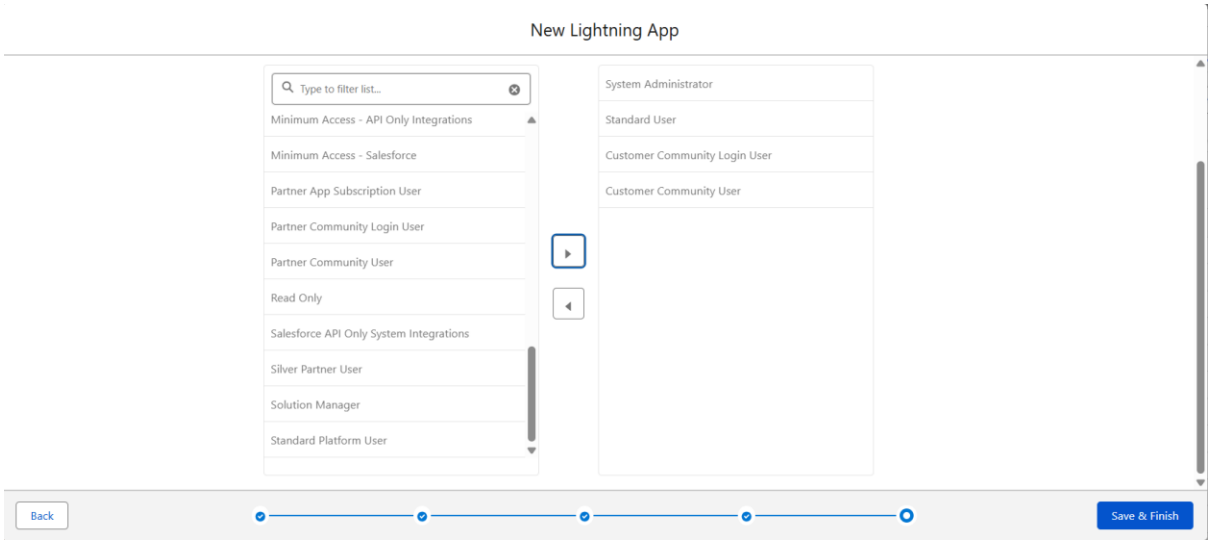
Navigation Items Selection :

I customized the application's navigation bar to prioritize user efficiency. I moved the following custom objects and tools into the Selected Items list: Customers, Merchandises, Orders, User Case, Reports, and Dashboards. This ensures that support agents have immediate, one-click access to all relevant data points.

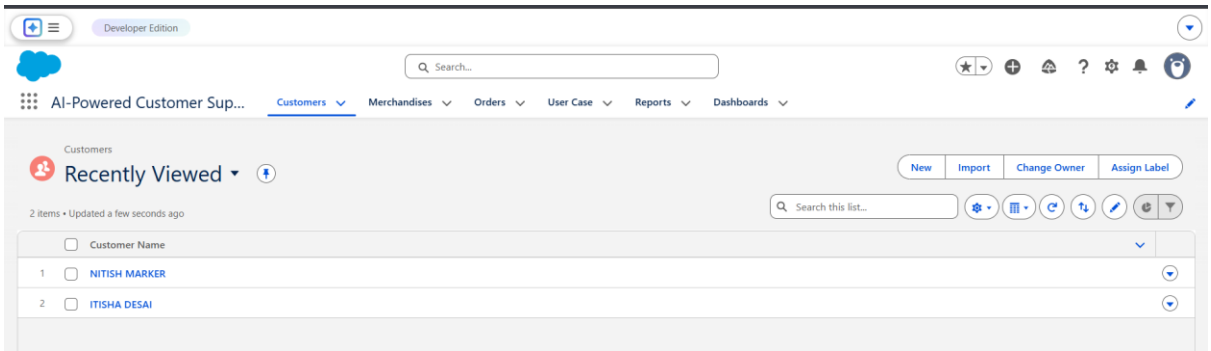


User Profile Assignment :

To ensure proper security and accessibility, I assigned the new application to specific User Profiles. This included the System Administrator, Standard User, and specific Customer Community profiles, ensuring that only authorized team members can access the service automation workspace.



3: Final Interface Deployment

Live Application Interface :


This final screenshot displays the deployed AI-Powered Customer Support application. It confirms that the custom navigation bar is active, the branding is applied, and the system is ready for data entry. The image specifically shows the Customers tab with sample records like "NITISH MARKER" and "ITISHA DESAI" populated in the list view.
